

Open programs quickly using a keyboard shortcut!

To use this keyboard shortcut, you must assign it to the program. A desktop shortcut for the program must be created—or one may already exist.

Right-click the icon and select "Properties".

In the "Shortcut" tab, you can define a keyboard shortcut in the middle.

It begins with "Ctrl" and "Alt". Then you can select a key.

You must have administrator rights to confirm.

With this shortcut, the program can then be started at any time.

(F1-F12 should not be used. Many programs already use these keys.

The key may need to be adjusted for the programs used. 😊)
